

Martec Sustainability policy

Martec considers sustainability one of the key elements for future success.

The following key elements have been considered in order of importance:

1. Reduce energy consumption from fossil sources and become self-generator
2. Keep water consumption low using closed loop systems only
3. Reduce CO2 generation by arranging multitasking goods transfers between warehouses & suppliers;
4. Reduce CO2 generation by arranging multitasking goods & people transfers between local units;
5. Reduce / keep low waste management through re-use and end-of-waste policies.
